

POWERWAND Patient Satisfaction Survey

The catheter you have placed in your vein is called the POWERWAND midline catheter. Kindly let us know, by filling out this survey, what your POWERWAND experience has been.

1. Insertion: Compared with other IV catheter insertions you may have had, was the insertion of the POWERWAND (circle one)

Comfortable

Acceptable

Unpleasant

2. Maintenance: Compared with other IV catheters you may have had, has your POWERWAND been (circle one)

Comfortable

Acceptable

Unpleasant

3. Blood Draws: Has your POWERWAND allowed for lab tests to be drawn through it and thereby spared you from additional needlesticks? (circle one)

Yes

No

4. Duration: Most IV catheters last 2 days or fewer. How many days has your POWERWAND lasted?

_____ days

5. If your POWERWAND has lasted more than 2-3 days (and/or) if your POWERWAND has been used for blood draws, you have had fewer needlesticks because of your POWERWAND catheter. How important has this result been to your overall satisfaction? (circle one)

Very Important

Somewhat Important

Unimportant

6. If you had to be in the hospital again, would you request a POWERWAND? (circle one)

Yes

No

Why? _____
